† These changes are the result of a new traction motor bearing seal arrangement introduced during 1976. This new arrangement removes unnecessary oil slingers designed for oil lubricated motors and incorporates other designed parts developed specifically for the current grease lubricated motors. See Pointers Article dated March 14, 1977 for details.

∤ In addition to the mechanism listed in the replacement column, (2) 8077940 mounting pads are required. Pads are to be tack welded per Sketch No. 1. Using the new mechanism as a template, drill and tap (2) 1/4 - 20 holes. The new mechanism has (2) switches reversed, the THS-1-8 switch is now on top and the THS-IDLE is directly beneath it. Care should be taken to connect the correct wire to the proper switch. When replacing a controller which has a selector, refer to Sketch No. 2 for wiring modifications.

It is recommended not to intermix diodes in one rectifier. When single diode requires replacing, use diode with same code number that is stamped on side of diode - Example 66-6228. All diodes within a single rectifier assembly must be of the same type. Individual diodes of one or more codes listed may be used to make up a matched pair for stock.

WIRE AND CABLE ORDERING REFERENCE

Under the columns headed "Symbol No." and "Specification Part No." are listed the specification numbers which appear on locomotive wiring diagrams. The part numbers by which the wire and cable is ordered are listed under the column headed "Ordering Part No.". The number of feet furnished under this ordering part number is shown in column "Length In Feet".

EXAMPLE: If 1000 ft. of 8453180 Cable is required, order 2-8475588 Cable.
If 500 ft. of 8284005 Cable is required, order 500 ft. 8284005 Cable.

The following is a list of codes used to classify wire and cable insulation under the column headed "Insulation".

A - Asbestos
AVA - Asbestos braid, Varnished cambraic and Asbestos taped
B - Bronze braid
C - Cotton
Cu - Copper braid
D - Dacron braid
EPR - Ethylene, Propylene, Rubber and Hypalon
F - Fiberglass
G - Glass braid
LF - Polyolefin (Exane)
N - Neoprene
OPR - Ozone Resistant Rubber
P - Paper
PE - Polyethylene
PH - Polyhalocarbon
PI - Polyimide
PVC - Polyvinylchloride
R - Rubber
RH - Heat Resistant Rubber
SR - Silicone Rubber
TFE - Teflon (Polyetrafluroethylene)
Vulk - Vulkene

EXAMPLE: A cable with insulation code SRG-D indicated that the cable has a layer of silicon rubber over the conductor, a layer of glass braid and a covering of dacron braid with a high temperature finish.
